PROFILE

A design research lead & strategist with dedicated expertise in the healthcare/medtech sectors, grounded in human-centred design to inform early-stage innovation. My expertise spans Quant & Qual, from deep ethnographic observations to launching global surveys. I translate complex realities and uncover user needs in the discovery phase into clear, actionable strategies that guide product development and de-risk the innovation process. I excel at bridging the gap between the users and the development team, bringing the unfiltered reality of the users' experience to the forefront of strategic innovation.

EXPERIENCE

Design Researcher Lead & Strategist

Worrell / Now part of Veranex | 2021 - Present

I lead human-centred design projects for global leading healthcare/medtech clients, uncovering and translating user insights into strategic recommendations. Sitting in the Research & Strategy team, under Product design and engineering in the London office.

My work spans qual & quant, with end-to-end generative research experience; from observations worldwide in clinical environments, to designing and launching global surveys across multiple geographies, to leading a small research & UI execution team, to orchestrating multilingual interview programmes, synthesising diverse data streams, and translating complexity into clear strategic direction. Shaping early strategy and de-risking investments, translating ambiguous challenges into clear innovation roadmaps, leveraging foundational artefacts (e.g., journey maps, insight reports, innovation roadmaps, co-creation/strategy workshops, etc.)

Human Factors Engineer

Medical Human Factors (medHF) | 2020-2021

As an HFE at a global human factors consultancy rooted in medical devices, I executed rigorous usability studies for regulatory submissions, providing me with a practical understanding of the validation process and risk management constraints that all upstream innovation must ultimately satisfy. This experience ensures my strategic recommendations are not only visionary but also viable and executable, particularly when it comes to study design and the iterative innovation process.

Army Field Medic

Israel Defence Forces | 2009-2011

Being the first life support in the field, training and base clinic.

LANGUAGES

- English
- Hebrew
- Spanish: Proficient

EDUCATION

Master of Science (MSc) | Digital Anthropology

University College London (UCL) | 2018 - 2019

Graduated with Merit. User-centred research in the case study of surgeons' use of minimal invasive surgery (da Vinci robotic system, Intuitive), performing ethnographic fieldwork in operating theatres, interviews with specialised surgeons and performing thematic analysis grounded in user experience.

Fellowship | International Centre for the Study of Radicalisation

Kings College London | 2017

Fellowship dedicated for researching the Israeli and Palestinian conflict.

Bachelor | Anthropology & Sociology

The Hebrew University of Jerusalem | 2013 - 2016

Graduated with honours.

FRAMEWORKS

- Human-Centered Design
- DVF (Desirability, Viability, Feasibility)
- BioDesign (Cambridge) / User needs
- User Requirement / Task analysis
- Jobs to be Done (JTBD)
- IBM enterprise (Design Hills)
- Gap, Pain & Journey Analysis
- Resonance & Usability Testing
- Phase 0 / Pre-formative Research
