

M. Mitchell Leverstone,

Design Research Lead, Product, UXR

✉ meyvain@gmail.com 🏠 mitch.leverstone.me

📍 London, UK

I help shape product strategy and align cross-functional teams around evidence-based decisions. My expertise lies in healthcare / MedTech organizations where I work to de-risk early-stage innovation by putting user experience at the centre of product strategy, translating ambiguous challenges into clear innovation roadmaps. My expertise spans Quant & Qual, as I work across the full research spectrum, end-to-end — from deep ethnographic observation to global-scale surveys and ideation and prioritisation workshops with key business stakeholders—translating complex human realities into strategic direction that product / business stakeholders can act on. The result is faster alignment, better-framed problems, and innovation built on evidence rather than assumptions.

Experience

Design Researcher Lead, Product Design Engineering, Worrell / Now part of Veranex, 2021–Present
London, UK

Leading human-centred design projects for global leaders in the healthcare/medtech sphere, uncovering and translating user insights into strategic recommendations. Sitting in the Research & Strategy team, under Product design and engineering in the London office.

I lead cross-functional team and my work spans qual & quant, with end-to-end research experience; from observations worldwide in clinical environments, to designing and launching global surveys across multiple geographies, to leading a small execution team, synthesising diverse data streams, and translating complexity into clear product strategic direction. Shaping early strategy and de-risking investments, translating ambiguous challenges into clear innovation/product roadmaps, leveraging foundational artefacts (e.g., journey maps, insight reports, co-creation/strategy workshops, user needs matrix, user requirements, product requirements).

Human Factors Engineer, Medical Human Factors (medHF), London, UK 2020–2021

As an HFE at a global human factors consultancy rooted in medical devices, executed rigorous usability studies for regulatory submissions, providing a practical understanding of the validation process and risk management constraints that all upstream innovation must ultimately satisfy. This experience ensures strategic recommendations are not only visionary but also viable and executable, particularly when it comes to study design and the iterative innovation process.

Army Field Medic, Israel Defence Forces 2009–2011

First life support in the field, covering training and base clinic duties.

Education

Master of Science (MSc), Digital Anthropology, University College London (UCL), UK 2018–2019

Graduated with Merit. User-centred research in the case study of surgeons' use of minimal invasive surgery (da Vinci robotic system, Intuitive), performing ethnographic fieldwork in operating theatres, interviews with specialised surgeons and performing thematic analysis grounded in user experience.

Fellowship, International Centre for the Study of Radicalisation (ICSR), King's College London, 2017
UK

Fellowship dedicated to researching the Israeli and Palestinian conflict.

Bachelor of Arts, Anthropology & Sociology, The Hebrew University of Jerusalem, Israel 2013–2016

Graduated with honours.

Frameworks & Methods

Human-Centered Design, Jobs to be Done (JTBD), DVF (Desirability, Viability, Feasibility), BioDesign (Cambridge) / User Needs, User Requirements & Task Analysis, Product requirements, IBM Enterprise Design Hills, Gap, Pain & Journey Analysis, Resonance & Usability Testing, Phase 0 / Pre-formative Research
